

TMP

MONITORING TARGETS

We specialise in manufacturing high quality monitoring targets to the Construction industry and Rail infrastructure

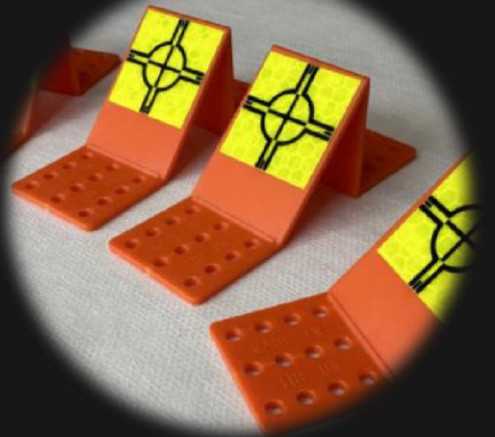

MT30 TARGET

The MT30 is a British made Monitoring Target used in the construction industry.

Not only is the MT30 used on the Rail Infrastructure Worldwide, It is also used within the wider construction industry including Highways. The MT30 is widely becoming the go to Monitoring target for Surveyors and Engineers alike. With ability to have a 30mm Retro target both on a 45' angle and 90' angle the MT30 is a versatile alternative to any other Monitoring Target on the market today.

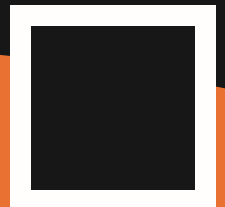

With its groundbreaking design the MT30 can be both wall mounted using high strength adhesive or fixed directly to any structure using wall plugs and screws.

The MT30 is made of durable material which makes it resistant, perfect for long term projects which will see a varied change in weather.

FB30 TARGET

The FB30 was designed for them more tricky areas to see. With the base of the target being a Dodecagon, it makes the FB30 versatile.

We have found this to be the “Chosen one” when it comes to Monitoring piles as it has the extra height when fixed on its side for the engineer or surveyor to easily see them when placed in the “dish” or on the “face” of the pile.

Made from the same material as the MT30 you can rest assured it will stand up to the weather for the length of your project.

TMP 45

The TMP 45' is a Prism target with a 12.7mm corner cube prism housed in a protective casing. It has been used on multiple projects as control and has even been used on the Rail Infrastructure for Automated Monitoring.

All though its small in stature it more than holds its own in terms of accuracy. Being smaller than others on the market and around a third of the price. It has been widely used by many industry leaders. It is compact and fits snug in the Web of the rail also being robust enough to withstand the heavy freight or main line traffic that will run on the line daily. With its detachable base plate, the body of the prism can be reused again saving the expense of buying expensive prisms repeatedly.

RETRO TARGETS

TMP also offer a wide range of retro (Reflector less) Targets. These come in sizes of 25, 30, 40, 50 and 100mm
